1. SCOPE:

XE64K Series, HC/ACMOS, high reliability hybrid microcircuit crystal oscillators are designed, produced and tested by Xsis Electronics, Inc. as MIL-PRF-38534 (modified), Class K equivalent devices, as described herein, for use in high reliability industrial, military, avionics and space applications. These devices are of hybrid microcircuit technology conforming to MIL-PRF-55310, Type 1, Class 2 oscillators.

1.1 ALTERNATE MODELS: Models XE64E, XE64B and XE64P with reduced QCI and/or reduced screening and shorter lead times are also offered as explained on page 5.

2. APPLICABLE DOCUMENTS:

MIL-PRF-55310F	Oscillator, Crystal Controlled, General Specifications for
MIL-PRF-38534K	Hybrid Microcircuits, General Specifications for
MIL-STD-883L	Test Methods and Procedures for Microelectronics

3. REQUIREMENTS:

3.1 General: The individual item requirements shall be as specified herein.

3.2 Package: Ceramic, 90% Min. AL₂O₃, Weight: 0.6 Gms Max., Thermal Resistance, θ_{JC} : 28 °C / Watt.

3.2.1 Lead Material & finish: Kovar, 50 to 70 micro-inches gold over 100 to 250 micro-inches nickel. Hot Solder tinning with Sn63/Pb37 solder per MIL-PRF-55310 is optional at an additional cost.

3.2.2 Reflow Soldering: Reflow soldering at 260 °C for 10 seconds shall not degrade the performance.

3.3 Hermeticity: Resistance welded, hermetically sealed, leak rate of 1 x (10)⁻⁸ atm-cc/s Max.

3.4 Marking: As a minimum, the parts shall be marked with Xsis P/N, ESD symbol, date code and serial number.

3.5 Absolute Maximum Ratings: Unless otherwise specified, absolute maximum ratings shall be as follows:

Supply Voltage	See Table I
Operating Free-Air Temperature Range	-55°C to +125°C
Storage Temperature	-55°C to +125°C

3.6 Electrical Characteristics: See Table I

3.6.1 Total Dose Radiation: Hybrid Microcircuit Crystal Oscillators shall be capable of meeting the electrical characteristics of Para. 3.6 after being exposed to total ionizing dose radiation of 100 krads as per MIL-STD-883, method 1019.

3.7 Hybrid Elements:

3.7.1 Quartz Crystals: A high grade cultured quartz crystal shall be used. As an option, Xsis will use a premium Q swept quartz crystal at an additional charge, refer to part numbering example in paragraph 6 to specify swept quartz crystal. Crystal element evaluation shall be in accordance with MIL-PRF-55310.

3.7.2 Crystal Mounting: The crystal element shall be mounted at 4 points in such a manner as to provide adequate ruggedness and performance under extreme environments specified herein.

3.7.3 Passive Elements: Established Reliability (ER) QPL components, failure level R minimum shall be used or element evaluation shall be as per MIL-PRF-38534, Level K.

2 OF 11

- 3.7.4 The Microcircuit die shall be from lots that have passed the element evaluation per MIL-PRF-38534, Level K. In addition, ionizing radiation testing shall be performed at the oscillator level as explained in paragraph 3.7.5 herein.
- 3.7.5 For Output Frequencies up to 70 MHz for 2.5V parts, and up to 90 MHz for 3.3V & 5.0V parts, the microcircuit die shall be from NSC/FC 54ACT family. For higher output frequencies, the microcircuit die shall be from 0.8 μm BiCMOS Si family. The Microcircuit die shall be from wafer lots that have been successfully tested in the oscillator for ionizing radiation up to 100 krad. Xsis Electronics has also performed SET & SEL testing on both types of microcircuit die stated above. Both die are SEL immune for LET of up to 95 Mev-cm²/mg. Test reports are available on request.
- 3.7.6 Workmanship, Rework and Process controls shall be in accordance with the requirements of MIL-PRF-55310 and MIL-PRF-38534 as applicable.
- 3.7.7 Lot Traceability: Production lot for these oscillators shall be homogenous. Each element used in the production lot shall be traceable to a single lot. Swept quartz shall be traceable to the quartz bar, and its applicable processing details.
- 3.7.8 Prohibited Materials: The following items shall not be used in these oscillators: Pure Tin (Sn >97%), Cadmium, Zinc, Mercury, Selenium, Silver as under plate. Gold Plating without a nickel barrier.
- 3.7.9 Element Derating: All active and passive elements shall be derated in accordance with the applicable Hybrid microcircuit requirements of MIL-STD-975. Elements shall not operate in excess of derated values.
- 3.7.10 Material Outgassing: All materials shall meet a TML of 1% Max. and a CVCM of 0.1% Max., when tested in accordance with ASTM E595.

4. QUALITY ASSURANCE PROVISIONS: The quality assurance provisions shall be as specified herein.

- 4.1 100% Screening: The 100% screening shall be performed as per Table II. PDA requirements for nondestructive bond pull, burn-in and frequency aging shall be as specified below.
- 4.2 PDA for Nondestruct Bond Pull: Unless otherwise specified, PDA shall be 2% of total number of wires or one wire whichever is greater.
- 4.3 PDA for Burn-in: Unless otherwise specified, PDA for burn-in #2 shall be 2% or 1 oscillator whichever is greater and shall be applicable to +23 °C and/or +25 °C static tests only. In addition Delta Calculation shall be performed after Burn-in and shall count for PDA. All measured values for Delta Calculation shall be recorded. Parts that exceed the specified delta limits shall be rejected and be counted for PDA. Delta Calculation shall be performed at 2.5 VDC, 3.3 VDC or 5.0 VDC as applicable for the following parameters:

Input Current	10% change Maximum
Output High Level	10% change Maximum
Output Low Level	0.1V change Maximum

- 4.4 PDA for Frequency Aging: 5% or 1 oscillator whichever is greater. Delta limit for frequency aging shall be as specified in Table I.
- 4.5 Group A inspection shall be performed as per Table III.
- 4.6 Group B inspection shall be performed as per Table IV.
- 4.7 If required by the purchase order, Group C inspection shall be performed as per Table V.

NOTE: Frequency accuracy limit after life test shall be increased by 10 PPM to allow for Accelerated frequency aging at +125°C.

XSIS ELECTRONICS, INC. 12620 W. 63 rd St., Shawnee, KS 66216 USA Tel: 913-631-0448 e-mail: xsis@xis.com website: www.xsis.com	FSC NO. 57051	DWG. NO. XE64K	REV C
	SCALE N/A	SHEET 3 OF 11	

- 4.8 Group D inspection per Table VI is omitted because it is performed as a part of receiving inspection of packages.
- 4.9 Inspection and Test Data: Unless otherwise specified in the purchase order, the following Inspection and test data documentation shall be supplied with the parts.

(See Page 5 for the description of the Model Numbers XE64E, XE64B & XE64P)

Model XE64K:

Certificate of Conformance
 Summary of Screening Test Results per Table II
 PDA Calculations for Non-Destruct Bond Pull and Burn-in
 Summary of Elements Lot Traceability
 Electrical Tests before and after Burn-in
 Group A Inspection Summary
 Group B Inspection Data
 Group C Inspection Data, if required by the purchase order
 Group D Inspection Data
 Radiographic Inspection Certificate

Model XE64E:

Certificate of Conformance
 Summary of Screening Test Results per Table VII
 Summary of Elements Lot Traceability
 Group A Inspection Summary
 Radiographic Inspection Certificate

Model XE64B:

Certificate of Conformance
 Summary of Screening Test Results per Table VII
 Group A Inspection Summary
 Radiographic Inspection Certificate, if required by the Purchase Order

Model XE64P:

Certificate of Conformance

- 4.10 The following test and inspection options are available at customer request.

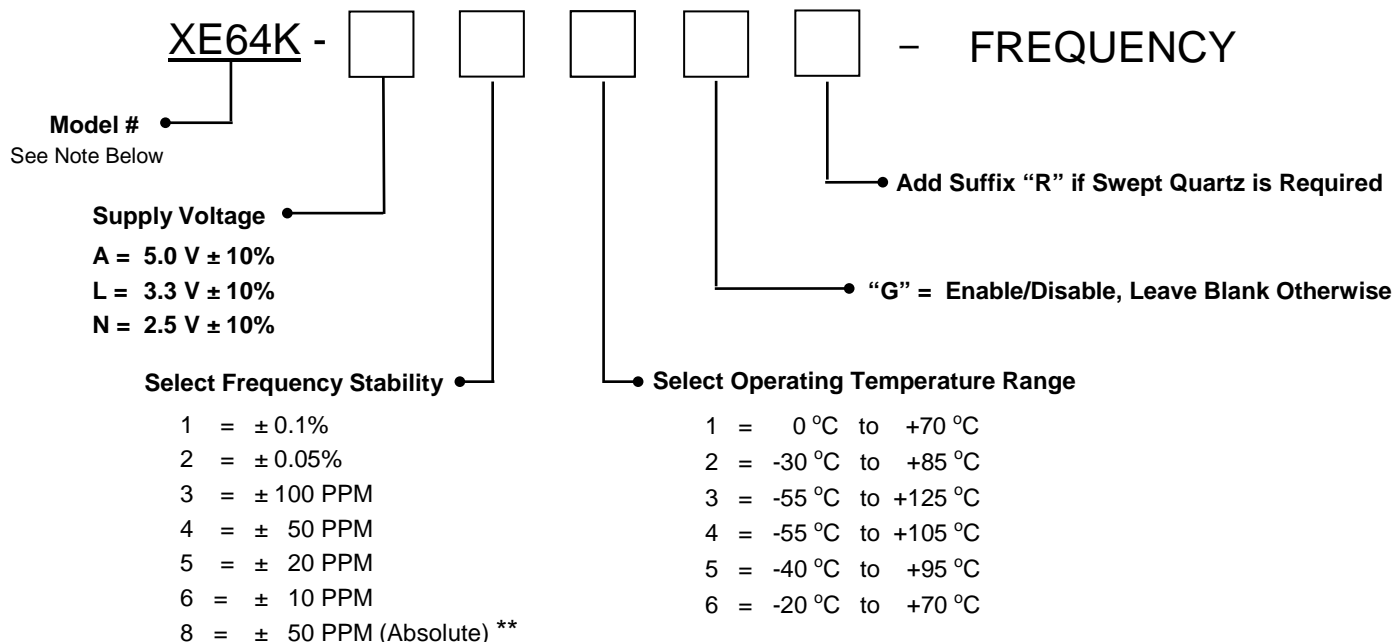

Customer Source Inspection for Pre-Cap and Final
 DPA (Destructive Physical Analysis)
 Group C testing per Table V

5. PRESERVATION, PACKAGING AND PACKING:

The oscillators shall be clean, dry and packaged in a manner to provide adequate protection against electrostatic discharge, corrosion, deterioration and physical damage during shipment.

XSIS ELECTRONICS, INC. 12620 W. 63 rd St., Shawnee, KS 66216 USA Tel: 913-631-0448 e-mail: xsis@xis.com website: www.xsis.com	FSC NO. 57051	DWG. NO. XE64K	REV C
	SCALE N/A	SHEET 4 OF 11	

6. PART NUMBERING EXAMPLE:

** Option 8 provides ± 50 PPM frequency-temperature stability referenced to the specified nominal frequency including load & supply voltage variations of ± 10%.

(Frequency Stability Options 5 & 6 are not available for all Temperature Range Options)

P/N Example: XE64K - L43 - 24.000 MHz = 24.000 MHz, 3.3V Oscillator, ± 50 PPM Frequency Stability over an operating temperature range of -55 °C to +125 °C.

NOTE: Besides model **XE64K**, the following additional models are available for applications that can accommodate reduced level of screening and quality conformance inspection:

XE64E: Model **XE64E** uses the same design and elements as **Model XE64K** except as follows:

- 100% screening is as per Table III herein
- PDA for Burn-in is 10% or 1 unit whichever is greater
- Delta measurements of paragraph 4.3 are not applicable
- Group A inspection is as per MIL-PRF-55310, Class B
- Group B inspection (30 day aging) per MIL-PRF-55310 is not applicable

XE64B: Model **XE64B** is same as **Model XE64E** except as follows:

- Active and Passive Elements are as per MIL-PRF-55310, Class B. The Microcircuit die is the same as in Model XE64K but is not from a radiation tested wafer lot.
- Radiographic Inspection is not applicable, unless required by the Purchase Order at additional cost.

XE64P: Model **XE64P** is a form, fit and function equivalent prototype of **Model XE64K**.

- Prototypes may use commercial grade elements and are not screened.
- Quality Conformance inspection is not applicable
